## Collaboration between ARSACS Researchers

VOSviewer

Figure1. Network representation of the collaboration between investigators in ARSACS research over the past 40 years. The links represent co-authorship between researchers. The size of the investigator's names and circle is proportional to the number of publications. The distance between investigators is inversely proportional to their relatedness level through co-authorship. The representation has been created using VOSviewer 1.6.1

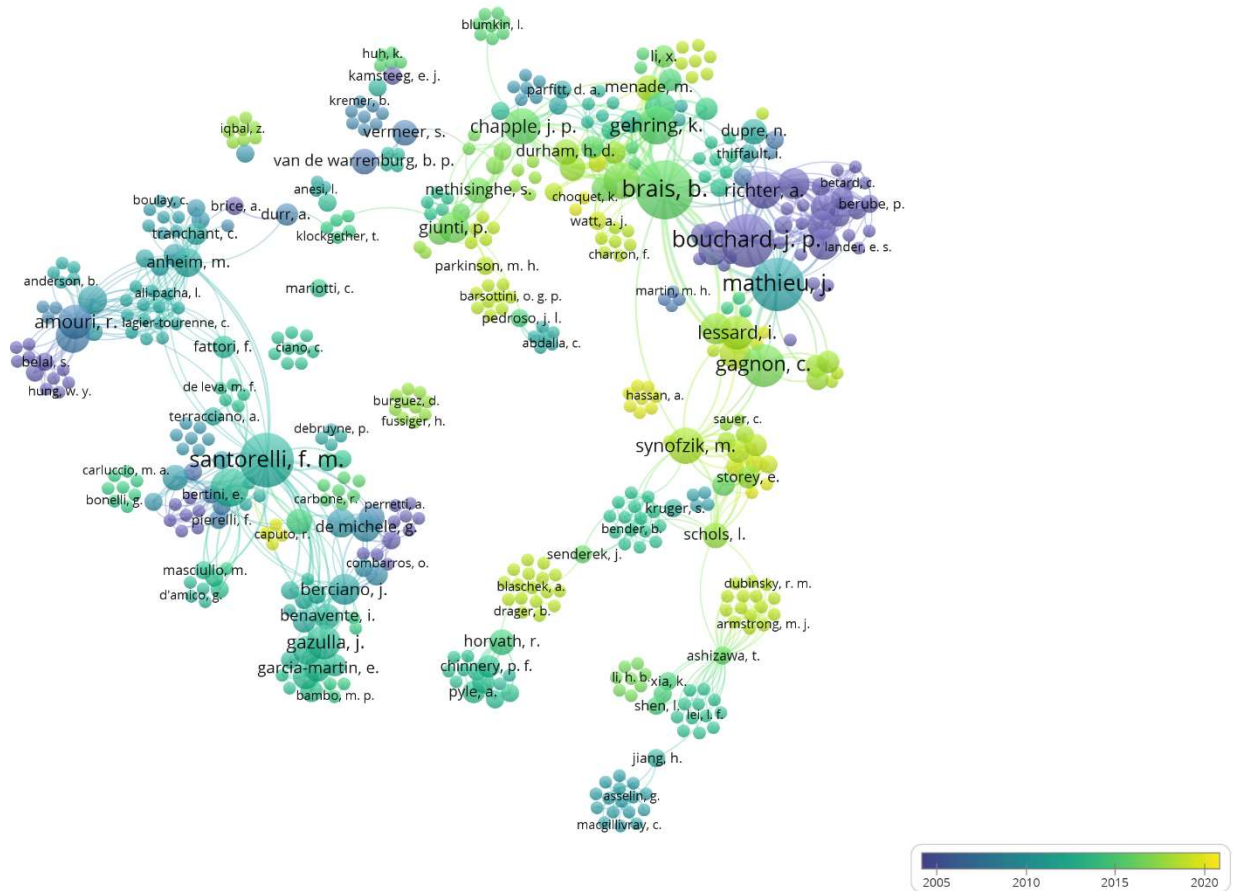

Figure2. Network representation of the collaboration between investigators in ARSACS. The links represent co-authorship between researchers. The size of the investigator's names and circle is proportional to the number of publications. The distance between investigators is inversely proportional to their relatedness level through co-authorship. The average year of publications for all publications of individual authors is indicated by a color overlay. The representation has been created using VOSviewer [1.6.11](#)
